

Errata

Gerber, Alan S., Donald P. Green. 2012. *Field Experiments: Design, Analysis, and Interpretation*. New York: W.W. Norton.

This document summarizes corrections to the text and accompanying materials as of 11-10-19.

Corrections for the Seventh printing:

The two rightmost table headings in Table 3.7 should have “bars” over $Y_j(0)$ and $Y_j(1)$

At present page 138, equation 5.1 states:

$d_i(\mathbf{z}) = d_i(\mathbf{z}')$ if $\mathbf{z} = \mathbf{z}'$

but the subscripts for i are missing. The equation should read:

$d_i(\mathbf{z}) = d_i(\mathbf{z}')$ if $\mathbf{z}_i = \mathbf{z}'_i$

p.223, line 8: insert “invariably” between “are” and “missing”

p.306, line 13 after the box: change “letter:” to “letter (omitting the intercept):”

Corrections for the Sixth printing:

The second line in the title of table 7.6 on p.239 should say “100,000 simulations” rather than “10,000 simulations”

Corrections for the Fifth printing:

Page 270, line 1: change “-4.9, which is close to” to “-5.0, which recovers”

Page 270, line 21: change “-4.9” to “-5.0”

Page 287, question 11. Change “Return to the stepped-wedge advertising example in section 8.6...” to “Return to the stepped-wedge advertising example in section 8.5...”

Corrections for Fourth printing:

p.32, Box 2.5, line 5: change “let m be the number of subjects who are assigned” to “let m be the expected number of subjects who will be assigned”

p.197: in the first column of Table 6.5, put a “hat” symbol over “ITT_D” in line 5, over “ITT” in line 10, and “CACE” in line 11

p.239: change “10,000” to “100,000” in the second line of the title to Table 7.6

Corrections prior to third printing:

On p.92, problem 11a: change "assuming half of the clusters are randomly assigned to treatment" to "assuming that 4 of the 7 clusters are randomly assigned to treatment"

p.120, box 4.4, line 8: change “regressing e_{Yi} and e_{di} ” to “regressing e_{Yi} on e_{di} ”

p.144, 3 lines after equation 5.13: change “among those if all subjects were assigned to control” to “if all subjects were assigned to treatment”

p.144, 1 line after equation 5.14: change “assigned to treatment” to “assigned to control”

p.225, line 10: change “treatment and control” to “control and treatment”

p.235: Equation (7.30) should equal -1.2, not -0.8.

p.235: Two lines below equation (7.30), change "3.5 units" to "3.9 units"

p.283, question 1b, line 2: change “section 8.4” to “section 8.3”

p.371, second full paragraph, line 5: change “goups” to “groups”

p.372, figure 11.3, title should be “Log odds” rather than “Log adds”

Corrections prior to second printing:

1. P.10, footnote 20: The name “Barabus” should be spelled “Barabas.”
2. P.60, footnote 7: Replace “See Freedman, Pisani, and Purves 1998, pp.A32-A34” with “See Samii and Aronow 2012, pp.366-367 for proof that Equation (3.6), when squared, is a conservative estimator of equation (3.4), when squared.”
3. P.74, footnote 17 should have a “hat” sign over ATE_j
4. P.88: Problem 3.5(e) says "less sampling variability" but should say "more sampling variability." The $m=1$ design's true SE is 6.76, whereas the $m=6$ design's true SE is 4.23.
5. P.89: One observation from the Titiunik dataset (AK, $d=0$, $Y=17$) was omitted from the table.

6. P.90: In problem 3.10, change “has the same” to “has approximately the same.” The correspondence between equations 3.4 and 3.22 is approximate, not exact, because 3.22 holds only for a specific sample and does not take into account the sampling uncertainty associated with random assignment of individuals to clusters.
7. Problem 10a on page 130 asks you to “Regress treatment assignment on the entire set of past votes, and calculate the sum of squared residuals.” It should read: “Regress treatment assignment on the entire set of past votes, and record the associated F-statistic.”
8. P.138. In equation (5.1), the terms z and z' should be bolded. In the line after equation (5.1), the terms z and z' should be bolded.
9. P. 144, third line below equation (5.13), change “in the treatment group can be written as” to “if all subjects were assigned to treatment are”
10. P. 144, one line below equation (5.14), change “among those in the control group” to “if all subjects were assigned to control”
11. P.168: questions 4c and 4d have an extra parenthesis. The expression “ $z=1$,” should read “ $z=1$,”
12. P.209, question (c), line 3. Insert this footnote after the sentence ending in “treatment).” Footnote: “For a discussion of the statistical properties of the 2SLS estimator when the treatment is continuous (as pre-academic skills are in this example), see Angrist and Pischke 2009, pp.181-186. See, in particular, their Theorem 4.5.3 and the augmented set of assumptions required to extract an “average causal response” when treatments vary in intensity.
13. P.222, 2 lines below equation (7.15): change “appear nowhere in this formula” to “have no effect on the sum.
14. On p.226, under section 7.4, the first sentence should read: “When attrition is neither random, random conditional on X , nor confined to Never-Reporters, the researcher...”
15. Delete the word “extreme” in line 1 of p.229.
16. P.244, line 5: change “monotony” to “monotonicity”
17. P.267, 1 line below equation (8.4): change “ $\mu_i = 6$ ” to “ $\mu_i = 10$ ”
18. P.281, 9 lines from bottom: change “by” to “be”
19. P.284, question 5b: change “effect” to “effects”
20. P.315: replace questions 7(a) and 7(b) with the following:
 - a) For each city, interpret the apparent treatment effects of a black name and a low quality resume on the probability of receiving a follow-up call.
 - b) Propose a regression model that assesses the effects of the treatments, interaction between them, and interactions between the treatments and the covariate, city, where city is coded 1 for subjects in Boston.
21. P.339, table at the top of the page, column 5: the heading should read $Y_i(m = 1, z = 1)$, not $Y_i(m = 1, z = 0)$
22. P.339, problem (h), line 2: insert “average” before “indirect”
23. P.339, problem (k): delete this question

24. P.415, second full para, line 7: change “judged as a” to “judged. Rather, they are part of a”
